

Legacy C-130 Pressure Balance Compensator Upgrade

Derco offers Senior Aerospace SSP bleed air compensators which are standard equipment on C-130J model aircraft, and also approved by the OEM for legacy B/H aircraft (SB 82-813). The new compensators exceed the specifications for resistance to oxidation and corrosion, and are qualified to higher vibration and endurance levels versus the legacy components. The compensators are a form-fit-function and value-added upgrade that increase performance and reduce aircraft downtime.

Product Highlights

- Inconel 625 material withstands temperature and pressure extremes
- One piece design with integral insulation
- Easier to compress and install
- Increased vibration tolerance and corrosion resistance

Derco Support

Derco is an international military aftermarket distributor for Senior SSP. For more information, please contact a Derco representative.
